

INFORMATION TECHNIQUES IN A CONTROL AUTOMATION BY DUMP OF AN AUTO GRADER AT DEVELOPMENT OF A GROUND

Yu.F. Ustinov, A.D. Kononov, A.A. Kononov

The version of a simulation modeling of operation of an auto grader in a tractive condition surveyed at holding the basic technological operation - scheduling of a ground. The brief exposition of the control algorithm on parameter of instantaneous productivity sectionals. The skeleton diagram of system of simulation of a working process on a computer is reduced. The regularity of the selected approach to the solution of a problem of a heightening of an overall performance of an auto grader is affirmed at scheduling a ground.
