

# **THE DEVELOPMENT OF SUPPOSITORIES WITH PANTOGAM**

*N.S. Nazarenko, I.A. Deviatkina, A.I. Slivkin, A.S. Volodina*

Pantogam - is a well-known Russian nootropic, possessing various cerebrospecific effects, related to its metabolic, neuroprotective and neurotrophic activity. There was researched an opportunity of producing a new dosage form – suppositories with Pantogam – to provide successful treatment for pathology of nervous system. Suppository composing and technology was substantiated in theory and experiments, the quality rating was examined. It was proved, that sample suppositories meet all the standards of regulatory documents.
