

GENETIC VARIABILITY OF A SILVER BIRCH UNDER FORMS CRACK A BARK ON THE BASIS OF THE QUALITATIVE CHARACTERISTIC OF FIBERS

E. V. Kleshcheva

Materials of clause (article) are devoted to research of individual variability of a silver birch in CCR to quantitative and qualitative attributes, biochemical properties. Genetic variability of forms is shown as a bark of a silver birch on bast-fiber is shown a fabric. The question on use of genetic markers for identification silver birches under forms a bark is considered (examined).
