

SEXUAL, STAGES, PHYSIOLOGICAL AND PSYCHOLOGICAL ADAPTATION TO STUDY AT HIGH SCHOOL

O. L. Stepanchikova, L. N. Khitsova

Properties of temperament and parameters describing a level of health were determined at 123 students of 1-3 courses of biology and soil science faculty of Voronezh State University. In this research we established, that the process of adaptation consists of 3 stages. Besides, the analysis of correlation connections to a sexual attribute has shown that the initial processes of adaptation to the study at high education school at the young men and girl proceed with different dynamics and include various mechanisms.
