

SOIL MESOFAUNA IN CHERNOZEMS OF STONE STEPPE

D. I. Shcheglov, A. U. Chaplygin, V. V. Govorov

The purpose of researches was definition of influence of properties of soil and such as biological community as a whole on specific structure and distribution soil mesofauna. Researches soil mesofauna were carried out in 2005-2006 in territory of Stone steppe. On the basis of soil inspection in the given territory chernozems are revealed, in which have been selected (according to M.S.Giljarova's technique) large soil invertebrates.
