

**RESEARCH OF BEHAVIOUR OF CONSUMERS
TO APPLICATION OF PREPARATIONS
OF A PHYTOGENESIS FOR PREVENTIVE MAINTENANCE
AND TREATMENT CARDIOVASCULAR DISEASES**

N. V. Gabrielyan

On the basis of questioning the population the attitude of end users to application of medical products of a phytogenesis for treatment of diseases of cardio-vascular system is studied. The majority of respondents are preferred with the combined medical products. Herbs in most cases are got by the population in drug-stores or prepared independently for manufacturing water extraction in house conditions (tincture, reas).
