

## DEVELOPMENT AND RESEARCH HYPOGLIKEMIC FITOSPECIES

*M. A. Ogaj, E. F. Stepanova*

As a result of the lead experiments optimal composition gipoglikemical fitospecies has been developed on the basis of a grass ginostem, leaves of a laurel noble and a root of a licorice bare. The method of standartizing picks up. Basic groups BAV which is in charge of gipoglikemical effect (saponins, flavonoidis) fixed and proved gipoglikemical activity fitospecies at an experimental (alloxanic) diabetes.
