

THE PHARMACOLOGICAL RESEARCHING OF LIPOSOMAL MEANS FOR HAIR CARE

K. T. Shimovonyan, L. M. Kuzyakova

The influence of the liposomal and non-liposomal means of different concentration for hair care of different types was researched on laboratory animals (rats). The results of the experiment show: 1 the advantage of liposomal means over the non-liposomal; 2 the optimal concentration is 30% of biological active materials in liposomal forms.
