

BIOPHARMACEUTICAL ASPECTS OF DEVELOPMENT OF OINTMENT WITH OIL OF THE AMARANTH FOR TREATMENT OF THE BURN AND INFECTED WOUNDS

V. F. Dzyuba, E. F. Safonova, I. M. Korenskaya, I. A. Sveshnikova

Annually in Russia than 12 million patients with various wounds of a traumatic origin is registered more, that very often leads to development of purulent processes. In the Voronezh state university the opportunity of creation of the new medicinal form – ointments with oil of an amaranth for treatment early process including burns, trophic ulcers is investigated; oil at treatment both infected, and not infected burns on early terms (II day) reduces обсемененность ожоговых wounds in 10-20 times and renders.
