

DETERMINATION OF PANTOHAM IN DOSAGE FORMS

*N. S. Nazarenko, O. A. Dehanova, I. A. Devyatkina,
G. A. Kim, D. A. Slivkin*

Methods of PantoHam quantitation in new dosage form - granules - were developed. There was held a comparative analysis of two methods: spectrophotometric method, recommended by Pharmacopoeia Entry for drug substance of PantoHam, and titrimetric method, proposed by us. Certain advantages of the latter, such as rapidity, accuracy (precision) and repeatability, were clearly recognized.
