

A GEOGRAPHICAL ANALYSIS OF THE FLORA OF THE "GALICHJA GORA" RESERVE

L.N. Skolzneva

An analysis of the general areal distribution of species and their belonging to ecofloral communities is provided. 7 groups of geographical elements are singled out. The dominance of the Eurasian group and a big number of species populating the northern and north-western borders of the areals of is noted. The thesis about the floral integrity of the Eurasian meadow steppes is corroborated.
