

## **INFLUENCE OF BRANCH STRUCTURE OF THE COUNTRIES AND REGIONS OF THE RUSSIAN FEDERATION ON PARAMETERS OF PRODUCTION EFFICIENCY**

*L.P. Janovsky, T.A. Evglevskaja*

The degree of dependence of production macroeconomic parameters of efficiency from branch structure of manufacture on the countries of the world and regions of Russia is studied. Appeared, that in the best way distribution of shares of sectors of manufacture is connected to a physical index gross national product per capita. The equation describing more than 93 % of fluctuations is received for the countries with rather high level of a physical index per capita manufactures. At a level of regions of the Russian Federation also it was possible to describe 90.5 % of a variation of a total regional product per capital.
