

THE EXPERIENCE OF ONTOGENIC APPROACH TO INVESTIGATION DISCOVERY DIAMOND FROM THE LOWER CRETACEOUS CONTAINER OF LIPETSK REGION

Chereshinskiy A. V.

The results of the study small diamonds Voronezh antecline with positions ontogenic approach are given. The analysed particularities of diamond: habit, transparency, coloration, photoluminescence features. The family of crystal diamonds is revealing, and is shown their probable source – kimberlites of Archangelsk type.
