

# **THE RECENT TECTONIC MAP OF THE VORONEZH CRYSTALLINE MASSIF**

*Tregub A. I.*

The rational complex of investigation methods of neotectonic movements of ancient platforms are suggested. It included structural-geomorphology investigation (morphometric and morphographic analysis, study of deformation of the even surfaces), the full study of the neogen-quaternary structural-substance complex, investigations of modern structure of the sedimentary cover and crystalline foundation. At the base of this complex use the neotectonic map of the Voronezh crystalline massif was composed.
