

MONITORING OF THE NATURAL-TECHICAL ECOSYSTEMS (TERMINOLOGY-CONCEPTUAL APPARATUS)

Zinyukov Yu. M.

The monitoring of natural-technical ecosystems' optimization leads to development and introduction of new technique of designing of models of researched systems as complex natural-technical of objects. Under development of new methods of natural-technical interactions' modeling and organization of its monitoring new terms and concepts logically resulted from new approaches and new look at problem's solution are needed. The article introduces new special terminology-conceptual apparatus that is recommended to use under natural-technical ecosystems' monitoring.
