

GEOECOLOGICAL PROBLEMS OF DEVELOPMENT OF OIL-AND-GAS DEPOSITS OF THE WESTERN SIBERIA

Bocharov V.L., Egorov A.S.

The oil and gas extraction branch is one of the most ecologically dangerous branches wealth utilization. It differs big power consumption, significant pollution of extensive territories and high fire danger of industrial targets. Protection of bowels provides realization of a complex of actions on prevention of losses of oil and gas, a safety of the population, rational use of superficial and underground waters, and prevention of their pollution.
