

**ABOUT EVOLUTION OF THE ALLUVIAL
SEDIMENTATION IN GEOLOGIC HISTORY
(ON THE EXAMPLE VORONEZH ANTEKЛИЗЫ)**

Kholmovoy G.V.

Features of a structure of alluvial formations (educations) from the bottom Proterozoic up to a Holocene of territory Voronezh anteklise and some other regions are considered (examined). Two main boundaries in evolution of an alluvial sedimentation are allocated: 1) early Paleozoic from which there are the rivers having modern analogues, and 2) prequaternary from which beginning all variety of types and forms (molds) alluvium is formed.
