

**THE FORECAST OF INFLUENCE
FOR AN ENVIRONMENT YUBILEYNOGO
GAZOKONDENSAT DEPOSITS
(THE TYUMEN REGION)**

V.L. Bocharov, A.S. Egorov

The oil and gas extraction industry represents one of the most ecologically dangerous branches utilization. The estimation of potential influence of objects of a gas craft on an environment objectively testifies, that, not looking on the planned nature protection actions the certain damage will be put to the nature. Technologies used now oil and gas extractions do not allow refusing completely emissions (dumps) of polluting substances in the natural environment. In connection with reduction of stocks of biological resources there is a necessity of compensation of damage as compensation payments and in the long term, development of new more perfect without waste technologies.
