

## **ACCELERATED METHOD OF DETERMINATION OF THE LIMIT PLASTIC OF SOIL**

*I.A. Smolianitsky*

The limit plastic of soil is important characteristic. It's determination by standard way is very laborious and includes organoleptic ways, that reduce precision of measuring. In this work is proposed a new method acceleration of determination of dampness corresponding plastic limit based on the property of clay, is differently moisture after dry up according of dry dampness. This method is recommended for engineer, geological finding in building and carrying out of engineer, geological shooting of territory.
