

REPRESENTATION OF HOMONYMS IN DICTIONARIES

Kropotova L.V.

The article focuses on the problem of insufficiently objective and unified indication of homonyms in the dictionaries.

When indicating homonyms it is recommended to take into consideration four main characteristics that can help to determine existence or absence of homonymous relations between the words. Indication of a special semantic criterion for differentiation of polysemy and homonymy seems to be unreasonable until there has been worked out the definition for the given criteria of their identification Matytsina L.N. AAC OF PREFIXES (ON THE MATERIAL OF "PUSHKIN DICTIONARY") Compatibility of affixes (including quantitative compatibility) is viewed in this article as one of the essential characteristics that should be taken into consideration in the process of complex characterization of affixes. Affixative anomaly coefficient appears to be the value that determines valency correlation between homonymous affixes. The given article offers a status classification of prefixes built on the basis of values of AAC. The article also presents an attempt to examine the obtained results in the chronological aspect.
