

CONCEPT "HEALTH" IN PHYLOSOPHICAL DISCOURSE

E.S. Klimonova

Concerning the problem of health of the person the author addresses the concept of a paradigm as a system of methodological, axiological and other directives accepted as a sample of solutions of some range of tasks. The given concept can be heuristically meaningful in consideration of the problem of close corporal and spiritual health of a person. A holistic approach directed to construction of the whole picture of health of a person is regarded as necessary; it can be submitted in the context of natural science, spiritual and integrative (philosophically-anthropological) fields. The introduced fields focus the attention on the behavior of the person, on his active attitude to his own physical and spiritual health.
