

THE MAIN APPROACHES TO THE STUDY OF ADVERBIALS WITH LOCATIVE SEMANTICS (BASED ON THE SPANISH LANGUAGE)

V.V. Korneva

The article analyzes the most essential (from the grammatical point of view) approaches to interpretation of adverbials with locative semantics in the Spanish language. The article includes a complex description of adverbials as a word class, taking into consideration principles of modern theory of parts of speech; the description is complemented with a detailed analysis of judgments that belong to the most outstanding Russian and foreign romanists, among them the statements of the authors of the first Spanish grammars.
