

OPPORTUNITY OF APPLICATION CCD FOR INTEGRATED ALBEDO REGISTRATION OF OBJECTS WITH COMPLEX GEOMETRICAL STRUCTURE

Leonova L. Yu., Selivanov V. N.

In this paper the opportunity of albedo definition non-uniform sites of a surface is estimated, using the matrix photodetectors based on carry of a charge. At the decision of a problem experimental conformity between values of the reflected streams of radiation from researched objects and brightness of their digital images is established. Various methods of the segmentation are analyzed, allowing to allocate objects with differences of brightness.
