

## NUCLEAR REACTION $(n, \alpha \gamma)$ AS A TOOL FOR STUDY OF P-EVEN T-NONINVARIANT EFFECTS

*Borzakov S.B., Kurgalin S.D., Nikolenko V.G., Okunev I.S., Parzhitsky S.S., Popov Yu. P.,  
Ryabov Yu. V., Sinyakov A. V., Smotrisky L. M., Tshuvil'sky Yu. M.*

Prospects of an experimental research of five-vector correlation  $(k_\alpha \cdot [k_\gamma \times \sigma_n]) (k_\alpha \cdot k_\gamma)$  of the products of  $(n, \gamma \alpha)$ -reaction on a light nucleus for search for P-even T-noninvariant effect are considered. Potentialities of this reaction and the reaction  $(n, \gamma \gamma)$  for this purposes are compared.
